# Outputs of Interest

| Type | Variable | What It Tells Us |
|---|---|---|
| **Temporal** | Prey Consumed | Tracks when fish are consuming prey. |
| | Prey Species | Tracks what type of prey fish are consuming. |
| **Spatial** | Predation Events | Areas where predation is concentrated. |
| | Escape Events | Areas where predation is constantly avoided successfully. |

These outputs help us understand where and when predator–prey interactions happen, and may point to habitat features that increase risk or provide refuge.
